PROFILE :

Junior Full-Stack Developer recently trained, capable of handling both front-end and back-end development. Motivated, curious, and eager to contribute effectively to all stages of web development projects within a team environment.

TECHNICAL SKILLS :

Front-End: HTML5, CSS3, JavaScript, React.js, Bootstrap, Tailwind

Back-End: Laravel, REST API, MySQL

Tools: Git (version control), GitHub (code hosting), Trello (Agile project management)

Methodologies: Agile (project organization and tracking), rapid prototyping, planning and project management

Modeling: UML (class diagrams, use case diagrams, sequence diagrams)

Prototyping: Visual mockups (Figma)

Database Optimization: performance improvement, indexing, scalable architecture

AI Skills: Vibe Coding, Prompt Engineering, automation and bots

PERSONAL PROJECTS :

Weather API

Stack: HTML, CSS, JavaScript, OpenWeather API

- Development of a web application that displays real-time weather information.
- Integration of the OpenWeather API to retrieve temperature, humidity, and weather conditions.
- Responsive user interface with dynamic data updates.

GitHub: [Weather API](#)

User Manager

Stack: React.js + Node.js + Express + MongoDB

- Development of an API for user management.
- Implementation of CRUD operations to create, update, display, and delete users.
- Route organization and data management using MongoDB.

GitHub: [User Manager](#)

Task Flow Project

Stack: React.js + Laravel + REST API + MySQL

- Development of a task management application with a dashboard.
- Implementation of a user authentication system.
- Full task management including creation, editing, and deletion.
